
Review for the bachelor's thesis

Feedback on Thesis (software project)

Completed by a Student in Year 4, group 211 of the Bachelor's Programme "Data Science and Business Analytics"
at the HSE University Faculty of Computer Science

Evelina Victorovna Urusova

on the topic: **Implementing Machine Learning for Optimizing Debit Product Marketing.**

No.	Evaluation Criteria	Score (on a 10- point scale)	Comments
1	Research novelty/ Applicability of project results	10	This work identifies the key issues in promoting the Junior Card at T-bank and solves them by developing mathematically justified models and algorithms. The project results are directly applicable to the bank's marketing operations, showing a solid ability to translate research into practical solutions.
2	Relevance of the work	10	The thesis tackles a timely and significant problem in the financial sector—optimizing marketing efforts for a specialized product in a highly competitive environment. The focus on data-driven personalization and channel optimization directly addresses current industry challenges and trends.
3	Complexity and volume of the completed work	9	The thesis presents a well-rounded approach, progressing logically from understanding the business challenge to designing and comparing multiple models, and finally applying the results in practice. The use of uplift modeling and Bayesian channel optimization adds valuable complexity and showcases strong analytical skills.

4	Quality of the composed text. Clear and structured presentation of ideas.	8	The thesis is generally well written and logically organized, making complex ideas accessible. However, some visualizations lack sufficient explanation, and occasional formatting inconsistencies (such as missing paragraph breaks or brief commentary for figures) slightly detract from the overall clarity.
FINAL SCORE		9	This thesis presents a robust, well-structured, and business-oriented solution to the challenge of targeted marketing for a niche banking product. The work is distinguished by its clear alignment with industry needs, thorough methodological execution, and successful integration into real business processes. The author demonstrates strong analytical skills and the ability to translate complex data-driven insights into actionable and practical recommendations. The project showcases a high level of professionalism and contributes valuable knowledge applicable to marketing strategies in the banking sector.
